	<p>Plant Hanger Clip</p>	<p>Plant hanger clip fits inside the extrusion of Grandio and many other extrusion support style greenhouses.</p> <p>6</p>

1.1 Unwind about 12" of string from your Roller Plast Assembly, cut about 8" of the twine to tie a knot. Form a loop from the Plant Hanger Clip and the Roller Plast Assembly and tie the knot, see **A**. Wrap the string around the Roller Plast Assembly at the bottom to lock the twine in place, see **B**.

1.2 Insert the Plant Hanger Clip into the extrusion of your greenhouse roof frame as shown in **C**. Gently slide up the extrusion and then turn clockwise or to the right to lock into place, it will hold firm when tightened.

1.3 Locate the vine of the plant you want to trellis, unwind the string from the roller to the base of the plant. Wrap the string around the Roller Plast Assembly to lock the string in place.

1.4 Locate the Standard Clip, or the Two Piece Radial Hook that fits your plants needs best. Attach the clip or hook of your choice, then wind the vine of the plant counter clockwise around the twine so you will always know which way it winds as your plant grows. Attach more clips as needed, utilize the Super J Double Cluster Support Hooks and the Stem Holders as needed for your plant.
